TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, Java, C#, SQL, Bash, HTML, CSS, R

Libraries & Technologies: NumPy, Pandas, Scikit-Learn, PyTorch, Tensorflow, Keras, AWS (ECR, Lambda, EC2, DynamoDB, CloudWatch, S3), Docker, Kubernetes, Helm, Terraform, GitHub Actions, CircleCI, Vercel, CI/CD, React, Next.js, Node, Maven, Git, Linux, PyTest, Jest

Certifications: AWS Solutions Architect Associate

EXPERIENCE

Software Engineer - Engineering Enablement

May 2025 - Nov 2025

VGS

Remote

- Migrated 5+ outdated CI pipelines for high-visibility, tier-1 services from CircleCI to GitHub Actions across all engineering teams, improving development velocity and reducing pipeline CPU usage by 50% through optimized job orchestration and concurrency
- Refactored and modularized testing pipelines into parallelized jobs to accelerate developer feedback loops by reducing total CI pipeline execution time by 30%
- Introduced Orca security scanning for vulnerabilities, YAML linting, release-please for semantic versioning, and Docker image tagging using metadata annotations and multi-stage build definitions to ensure consistent and traceable release artifacts
- Created reusable CI workflows to publish Maven artifacts and push images to production ECR for standardized artifact delivery
- Automated Kubernetes and Helm deployments in internal GitOps repos to synchronize chart versions with product releases, ensuring consistent multi-environment rollouts and resulting in 80% reduction in developer overhead

Software Engineer - Product Modernization

Oct 2024 - Apr 2025

Chickasaw Nation Industries, Inc.

Remote

- Modernized a legacy Microsoft Access VBA-based data analytics tool to a C# and ASP.NET web application with AWS-backed cloud environment to improve quality of life and operational efficiency for federal employees

Software Engineer - Product Development

Aug 2023 - Oct 2024

Dev-Overflow

Remote

- Built an end-to-end data pipeline to scrape 20+ global banking websites with Playwright and automate storage with DynamoDB and AWS Lambda, supporting real-time processing and client alerts within 12 hours of publication
- Refined individual scrapers and custom utilities, using Python's unittest to raise value and type exceptions at application layer for rapid identification of scraping failures, increasing backend test coverage by 63%
- Introduced GitHub Actions workflows to automate testing and enforce code standards using Bash scripts, leading to a 93% reduction in manual intervention and simplifying the code review process
- Designed and styled account creation flows and responsive interfaces using TypeScript, React, and TailwindCSS for smooth UI interactions and consistent design across various devices and screen sizes

Software Engineer - Product Development

Jan 2023 - Aug 2023

OSLabs

New York, NY

- Led 0-to-1 development of NextSketch, a Next.js prototyping tool with real-time code and page visualizations, streamlining developer productivity for the open source community and earning 100+ GitHub stars

PROJECTS

AI Trading System • Built an AI trading agent using Random Forest decision trees on financial time-series data to evaluate automated trading strategies in a simulated market environment

Clearview • Developed a deep learning model with Tensorflow/Keras using Convolutional Neural Networks and image recognition to detect and classify chest cancer types with a 75% accuracy rate

EDUCATION

Georgia Institute of Technology • M.S. in Computer Science & Specialization in Artificial Intelligence

Expected May 2027

Stony Brook University • B.A. in Biology & Minor in Health, Medicine, and Society

INTERESTS

Marathon / Long Distance Running • Dragon Boat • Lion Dance • Cooking Meals From Scratch • Teamfight Tactics • Tennis
